SDC HACKATHON 2026 / DOMAIN 2

# Small kitchens plan with incomplete clarity.

Small food businesses often manage sales, recipes, ingredient costs, and stock in separate records. Without one connected view, deciding how much to prepare—and what to buy—can rely on guesswork.

**TEAM S.E.E.S**

SDC 12 · Responsible Consumption and Production

## Why this becomes a daily problem

Disconnected information makes planning harder than it needs to be.

01

### Demand is uncertain

Sales vary by menu item and day, making preparation quantities hard to estimate.

02

### Stock is fragmented

Ingredient counts, costs, and expiry dates may be tracked separately.

03

### Decisions are reactive

Over-preparation may leave food unused; under-preparation can cause shortages.

**THE GAP**

Operators need to connect recent sales with recipe requirements and usable stock before committing to tomorrow’s preparation and purchases.

**WHY DAPURPLAN**

### One workflow. Better-informed decisions.

Connect sales, recipes, ingredient stock, and demand estimates so operators can review preparation and shopping needs before acting.

*SDG 12 alignment is an intended benefit; impact must be validated in real use.*
